

Flex-Net® stands

50% Wider (30") Net Means More Wrap, Less waste!

Chances are that you're using 20" Flex-Net® right now. If you're not, let us tell you a bit about it — and give you the keys to its many, many advantages:

- *Flex-Net's built-in memory retains optimum tension on the load — all the way to the destination.*
- *Flex-Net's 30-50% elongation means higher yield, lower cost per wrapped pallet.*
- *Flex-Net exerts "Third dimension" pressure on the pallet — downward from the top.*
- *Flex-Net is manufactured under the exacting ISO 9001:2000 standard for quality assurance.*

**Flex-Net® comes in a 30" roll —
50% wider than the 20" width.**

***What does a 30" roll of Flex-Net®
mean to you in practical terms?***

Look on the other side and find out

What does a 30" roll of Flex-Net[®] mean to you in practical terms?

- Each wrap with 30" Flex-Net covers **50% more area** on the pallet. This means **fewer revolutions** and **less net wasted** on overlaps.
- With 30" Flex-Net you wrap **50% faster** — and wrap **50% more pallets** every working hour!
- Each wrap of 30" Flex-Net **unitizes more layers** of boxes, bags or cans at one time, for **better load retention**.
- The 30" Flex-Net is **perfect for wrapping pallets of bags**. Because of its width, it **grabs two or three layers**, and **won't slide in between the sacks**.
- Don't forget the Flex-Net advantage of **elongation for greater yield**. Now you have more net both ways: **length AND width!**
- **ONE** roll of 30" Flex-Net wraps as many pallets as **TWO** 20" x 10,000' rolls of conventional netting. Fewer roll changes, more efficiency, less waste.

What's the bottom line?
